

Muhammad Tatheer

AI Engineer · Full Stack Developer · AI Agent Developer · Computer Vision Developer

mtatheer333@gmail.com · +92-349-289-9537 · github.com/tatheer583 · Pakistan

SUMMARY

A student at National University of Technology with a deep interest in Artificial Intelligence and a drive to build intelligent systems that push beyond what exists today. Experienced in full-stack development, machine learning, computer vision, AI agents, and IoT. I design and ship complete AI-powered software — from idea to production — independently.

EDUCATION

National University of Technology (NUTECH) <i>Studying — Islamabad, Pakistan</i>	2025 – Onward
Public School and College Skardu <i>Studied — Skardu, Pakistan</i>	2023 – 2025
Model Boys High School, Khaplu <i>Studied — Khaplu, Gilgit-Baltistan, Pakistan</i>	2021 – 2023

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, Java, C++, SQL, HTML, CSS
Frontend	React, Next.js, Tailwind CSS, Flutter, Framer Motion
Backend	Node.js, Express.js, FastAPI, REST APIs, WebSockets
AI / ML	TensorFlow, PyTorch, Scikit-Learn, LangChain, HuggingFace, LLMs, AI Agents, RAG Systems, Model Fine-Tuning, Prompt Engineering
Computer Vision	OpenCV, YOLO, Object Detection, Real-Time Video Analysis
Databases	MongoDB, PostgreSQL, MySQL, Firebase
Tools & Cloud	Git, GitHub, Docker, Vercel, Render, Railway

PROJECTS

Jarvis AI Assistant <i>AI · Automation · Voice · NLP</i> - Built a voice-powered personal AI assistant with natural language understanding and full browser automation. - Integrated task scheduling, reminder management, and multi-step autonomous command execution. - Connected to LLM backends for intelligent, context-aware conversations and agentic task completion.	Python, LLMs, Speech Recognition, Browser Automation
Cyber Sathi — AI Cybersecurity Assistant <i>AI · Security · NLP</i> - Developed an AI tool that scans URLs, analyzes QR codes, and detects phishing and malware threats in real time. - Implemented AI risk scoring and message analysis to flag suspicious content before it reaches the user.	Python, ML, FastAPI, NLP
Drone AI System <i>Computer Vision · Autonomous Systems</i> - Engineered an autonomous drone with real-time AI vision for detecting humans, vehicles, buildings, and roads. - Built a live inference pipeline enabling navigation decisions driven entirely by visual AI output.	Python, OpenCV, YOLO, Navigation
Agevee Four Star Travel & Tours <i>Full Stack · Web Development</i> Built a professional luxury tourism platform with a complete booking system and responsive frontend.	React, Node.js, MongoDB, Tailwind CSS

- Designed an elegant, conversion-optimized UI communicating the brand's premium identity.

10-in-1 Smart IoT Security System

Python, Sensors, Real-Time Pipeline

IoT · Embedded Systems · Real-Time Monitoring

- Designed a multi-sensor smart security system integrating motion, sound, heat, and temperature detection.
- Built real-time owner alert pipeline and automated response system across 10 integrated hardware modules.

PERSPECTIVE ON AI & WHY IT MATTERS

Newton defined gravity and for centuries that was the ceiling — the complete picture of how the universe worked. Then Einstein arrived and showed that Newton was not wrong, he was just the foundation. Relativity and quantum mechanics did not erase what came before; they were built on top of it and unlocked an entirely new layer of understanding and possibility.

I think about AI the same way. The models we have today — GPT, Gemini, Claude, and everything emerging alongside them — are not the destination. They are our Newton. They are the new baseline. The real question is not how to use these tools, but what we build standing on top of them.

If AI can write code, then human time should not be spent writing boilerplate — it should be spent on the problems that only human imagination can define. If AI can process data faster than any team, then our energy belongs on the questions worth asking. The world runs on modern technology, and modern technology demands that we stop repeating the past and start compressing it — using everything already discovered as a launchpad for what has not been imagined yet.

My goal is to build on that launchpad: AI agents that reduce daily friction, computer vision systems embedded in the physical world, intelligent tools that give ordinary people capabilities that previously required entire teams. Not dependency on AI — but humanity, amplified.
